

Module 3

What I will learn

- logs
- SIEM dashboards
- common SIEM tools

common log sources

- Firewall logs
- Network logs
- Server logs

Firewall log

is a record of attempted or established connections for incoming traffic from the internet, it also includes outbound request to the internet from within the network.

Network log

is a record of all computers and devices that enter and leave the network, it also records connections between devices and services on the network.

Server log

is a record of events related to services, such as websites, emails, or file shares. It includes actions such as login, password, and user name requests.

Metrics

Key technical attributes, such as response time, availability and failure rate, which are used to assess the performance of a software application

Different types of SIEM tools

- Self-hosted
- cloud-hosted → vendor
- Hybrid

Splunk Enterprise

A self-hosted tool used to retain, analyze, and search an organization's log data to provide security information and alerts in real-time

Splunk cloud

A cloud-hosted tool used to collect, search, and monitor log data

Chronicle

A cloud-native tool designed to retain, analyze, and search data

open-source tools

linux

Suricata

Splunk dashboards

Security posture (SOCs)

Executive summary

Incident review

Risk analysis

Chronicle allows you to collect and analyze log data according to

A specific asset

A domain name

A user

An IP address

Chronicle dashboard

Enterprise insights

Data ingestion and health

IOC matches

Main

Rule detections

User sign in overview

Module 4

What I will learn

- Playbooks

Six phases of Incident response

Playbook

A manual that provides details about any operational action

Incident response

An organization's quick attempt to identify an attack, contain the damage, and correct the effects of a security breach

Incident response playbook phases

- Preparation
- Detection and analysis
- Containment
- Eradication and recovery
- ^{Post} incident activity
- Coordination

You can use playbooks for

- Open attacks
- Privacy incidents
- Data leaks
- Denial of service attacks
- Service alerts
- Others
